Profile

Software engineer with 10+ years of experience designing systems that remain stable under real-world pressure. Specialized in backend-heavy platforms, distributed integrations, and systems where digital logic must align with physical processes.

Focus areas include synchronization under uncertainty, data transformation across domains, and incremental modernization of long-lived systems. Particularly drawn to edge cases where abstractions break and manual work begins to appear.

Personal Statement

I'm drawn to the parts of systems most teams avoid: where data breaks, assumptions fail, and manual work starts to creep in.

That's usually where the real problems are, so I like to make those edges stable enough that the system keeps working when reality doesn't cooperate.

Core Strengths

Backend & Architecture

[PHP](#) ([Laravel](#), [Symfony](#)), [API Design](#)

Data & Integrations

[MySQL](#), [GraphQL](#), [external system orchestration](#)

Frontend (supporting role)

[React](#), [Vue.js](#), [TypeScript](#)

Infrastructure & Ops

[AWS](#), [Azure](#), [System Administration](#)

Special Focus

- [Time-sensitive synchronization](#) (real-time, marketplaces, logistics)
- [Data pipelines](#) across incompatible systems
- [Legacy modernization](#) without breaking auditability
- [Physical vs digital](#) system alignment (IoT, embedded, field processes)

Professional Experience

Senior PHP Engineer

[Read more...](#)

NextTuesday GmbH | September 2024 - March 2025

Maintained and evolved client systems across Laravel, React, and legacy frameworks during organizational restructuring.

- Stabilized heterogeneous systems under reduced team conditions
- Balanced modernization with continuity in long-lived applications
- Worked across CMS, logistics, and industrial client environments

Senior Full-stack Developer

[Read more...](#)

Ordio GmbH | February 2024 - June 2024

- Built data pipelines integrating HR systems (e.g. Workday)
- Designed guided workflows for non-technical users in operational environments
- Focused on data consistency during migrations and integrations

Senior Backend Developer

[Read more...](#)

Diligent Corp. | June 2022 - April 2023

- Maintained critical legacy systems in a governance & compliance platform
- Contributed to transition toward AWS and TypeScript services
- Ensured auditability and data integrity in high-stakes environments

Senior Full-stack Lead Developer (Freelance)

[Read more...](#)

Future Property Trade Kft | May 2021 - May 2022

- Led development of a social commerce platform connecting influencers, production, and logistics
- Designed systems aligning digital demand with physical manufacturing constraints

Senior Full-stack Developer

[Read more...](#)

Risskov Autoferien AG | January 2020 - April 2021

- Built multi-country booking systems with near real-time synchronization
- Improved partner-side tooling and reduced operational inconsistencies

Backend Developer

[Read more...](#)

TechTeamer Kft & MikroCredit Zrt | between 2018 and 2019

- Developed core systems for a digital lending platform
- Integrated identity verification, risk scoring, and loan lifecycle systems

Full-stack Developer (Freelance)

[Read more...](#)

WebShippy Kft | in 2018

- Built API and warehouse tooling for e-commerce fulfillment
- Connected webshop data with real-time physical operations

Early Career (Full-stack / System Admin)

[Read more...](#)

2014 - 2017

- Built internal systems for manufacturing, retail, and logistics
- Developed early configurators with extreme combinatorial complexity
- Gained operational insight across business workflows

Selected Projects & Open Work

- **WildNode (IoT):** Solar-powered environmental sensing system
- **ESP32 Streaming Experiment:** Real-time video under hardware constraints (open source)
- **Laravel Cron Bundle:** Database-driven scheduler with auditability
- **Model Railway Systems (WIP):** Real-time physical system simulation & control

[Read more...](#)[Read more...](#)[Read more...](#)[Read more...](#)

Education

- Electrical Engineering studies – Budapest University of Technology and Economics
- IT-focused secondary education
- Ongoing self-directed learning across software, hardware, and systems

Additional

- Languages: Hungarian (native), English (fluent), German (learning)
- Experience across Hungary & Germany
- Open to complex, cross-domain problems and system design challenges

Open to senior engineering roles and system design challenges where reliability matters under real-world load: tolacika.dev
